

YASMEEN BELHAJ

Front-End Engineer | Interactive Systems Designer

Bristol, UK | Website: yasmeenbelhaj.com
hello@yasmeenbelhaj.com | github.com/yasmeenbelhaj | linkedin.com/in/yasmeenbelhaj

PROFILE

Front-End Engineer and Interactive Systems Designer building responsive web applications and data-driven interactive experiences with React, TypeScript, Next.js, Unity and C#. Experienced in translating complex information into intuitive interfaces through research-led UX, interaction design and technical implementation. Recent work includes a Unity-based spatial reconstruction system with state-driven camera transitions, layered media interfaces and evidence-led interaction design. Combines front-end engineering skills with professional experience in structured analysis, problem solving and stakeholder communication. Seeking graduate opportunities in front-end engineering, product development and interactive systems.

TECHNOLOGIES

- **Languages:** JavaScript, TypeScript, Python, C#
- **Web:** HTML, CSS, React, Next.js, Tailwind CSS, Framer Motion
- **Interactive & 3D:** Unity, AR Foundation, Three.js, WebGL, p5.js, Maya, Blender
- **Tools:** Git, GitHub, VS Code, Netlify, Figma

CORE COMPETENCIES

- **Front-End Engineering:** React, Next.js, TypeScript, component-based architecture and API integration
- **Interactive Systems:** Unity, C#, state-driven interfaces, navigation systems and media-rich digital experiences
- **Information & Data Visualisation:** Translating complex information, research and source material into intuitive digital products and interactive experiences
- **UX & Accessibility:** User-centred design, accessibility, usability testing, interaction design and visual hierarchy
- **Collaborative Development:** Debugging, stakeholder communication, iterative development, presenting solutions and incorporating user feedback throughout project delivery

SELECTED TECHNICAL PROJECTS

Interactive Spatial Reconstruction – Visualising Truth

Unity · C# · Spatial UX · Information Design · Media Systems

- Designed and built a Unity-based interactive reconstruction that organises fragmented visual evidence into a spatial-temporal experience spanning six interconnected moments.
- Developed a state-driven camera and interaction system enabling users to navigate and explore interconnected moments, locations and evidence.
- Designed contextual media interfaces integrating photographs, testimony, video and supplementary evidence into a cohesive exploratory experience.
- Applied ethical and user-centred design principles to balance usability, clarity and sensitivity.
- Presented at the UWE Degree Show and awarded a First-Class mark (80%) for a project recognised for its sophistication, rigour and technical implementation.

Interactive 360° Heritage Experience – William Champion's Grotto

360° Media · Interactive Design · Heritage Interpretation · Stakeholder Collaboration

- Collaborated within a multidisciplinary team to develop an interactive 360° experience enabling remote access to William Champion's Grotto, a historic site with limited public opening.
- Worked with South Gloucestershire Council stakeholders to gather requirements, present concepts and refine the experience through iterative feedback.

- Structured historical content and media assets into an accessible exploratory experience supporting clear navigation and engagement.
- Contributed to the successful delivery of a publicly available digital heritage experience extending access beyond physical site visits.

Data-Driven AR Experience – Palestine: Lit by Loss

Unity · AR Foundation · C# · Data Visualisation · Spatial Interaction

- Developed a mobile augmented-reality application transforming live real-world datasets into interactive spatial visualisations that support exploration of humanitarian impact through immersive interaction.
- Implemented performance-aware interaction and object-generation systems supporting exploration of data within an immersive spatial environment.
- Integrated external datasets with AR visualisation workflows, enabling responsive updates and scalable content.
- Applied iterative testing and optimisation to balance usability, performance and visual clarity across devices.
- Awarded a First-Class mark (80%) for a data-driven AR experience recognised for its conceptual, technical and interaction design quality.

PROFESSIONAL EXPERIENCE

Project Coordinator (Volunteer) – B Squared Studio

May 2024 - Present

- Coordinate project timelines, task tracking and stakeholder communication to support the delivery of creative studio projects.
- Facilitate collaboration across multidisciplinary contributors, keeping priorities, progress and expectations aligned throughout delivery.

Freelance Digital Illustrator – Self-Employed

April 2022 - Present

- Deliver client-commissioned digital illustrations, translating briefs, references and feedback into final artwork.
- Collaborate with clients to refine concepts iteratively, balancing creative direction with project requirements.

Case Manager – Department for Work and Pensions

November 2017 - June 2023

- Managed a high-volume caseload involving complex claims, evidence review and detailed use of internal case-management systems.
- Analysed case histories and supporting evidence to identify inconsistencies, investigate discrepancies and support accurate decision-making.
- Communicated complex decisions clearly and empathetically, collaborating across teams to resolve issues and progress cases.

EDUCATION

BSc Digital Media – University of the West of England

September 2020 - Expected June 2026 (Part-time)

- Predicted Classification: First-Class Honours
- Relevant Modules: Creative Coding · Interaction Design · UX · Graphic & Web Design · Creative & Physical Computing · Media Production (Unity) · Design Enterprise Studio

ACHIEVEMENTS & DEVELOPMENT

- **Dell Technologies STEM Aspire Mentorship Programme** – Selected Mentee (Current)
- **UWE - SHAPE Summer Exchange School** – Hong Kong (2024)
- **Python Skills Bootcamp** – HyperionDev (2023)
